

Hartmut F. W. Hoft, Apr 14 2020

Plot of the number of ON-cells in each completed level with respect to the number of the level, up through level 4096, in each of the six hexagonal-grid triangles defined in sequence A151723. The values for even- and odd-numbered levels are confined to two distinct sectors. The boundary lines - exact and conjectured - of the two sectors are drawn.
